

IT-specialist to Danfoss Postgraduate Programme – map and create supply chain IT strategies, systems and processes

Denmark

Job reference:PGP00019

Don't think of yourself as an it-specialist – technically-minded environmentalist is far more accurate

As a postgraduate you will use your computer science background to create results within supply chain management. You will be part of a globally expanding business with the potential to make a significant, positive contribution to the climate worldwide. And you can look forward to being part of a community of dedicated professionals across cultures and borders in almost any country, you can think of. We count on you from day one, and during your 24 months on the programme you will be an active part of four to six business-critical projects in various departments.

Map and create Supply Chain IT strategies, systems and processes

You will join Danfoss Power Electronics division in our quest to define the next level of standardisation needed for Supply Chain (SC) technologies, such as systems, processes and equipment. Our ambitious goal is to ensure best practice of manufacturing support globally. You will play a vital role in that business critical process. Together with your team colleagues, including postgraduates from China and USA, you show the way by creating SC technology strategies, including systems and processes, and you will map internal and external stakeholders to SC technologies. The programme will give you deep knowledge within 1-2 specific SC technologies. And you will learn how to create and globalise a SC technology strategy as well as guidelines for each specific technology.

The programme involves at least two learning experiences abroad. The exact course of the programme will be planned in a continuous dialogue between your learning coach and you. Your good performance will open an exciting career path for you as e.g. SC Technology Expert or SC Technology Manager. You will start your programme in Danfoss Gråsten, Denmark.

IT-education on master level and Supply Chain knowledge

You are Software Engineer, have a master degree within computer science or similar. This has given you a basic manufacturing technology understanding, but your interest and knowledge lies within SC (logistics, manufacturing). Therefore you know SC IT-infrastructure and systems, e.g. MES (Manufacturing Execution System), quality IT-systems and equipment related IT software and systems – and the integration to other IT business systems. You also know about LEAN – and how to map and structure input. Finally, you need to have a certain level of both business and financial understanding. On the personal level, you are a team player with the ability to gather, structure and present knowledge and recommendations – in English. In addition, you can listen, facilitate and get things done. Last, but not least you are ready to travel and undertake tasks overseas.

Apply today

We will close the position the moment we have the right candidate on hand. Don't miss out on making an

impact apply now and be sure to include a CV and grade transcripts. Start date to be agreed.

The Danfoss Power Electronics division has three business units: Danfoss VLT® Drives, Danfoss Customised Power Electronics and Danfoss Solar Inverters. With supply chain, research and development centres in China, Denmark, United States and Germany, we develop, produce and market high quality energy-efficient power electronics solutions. Our solutions are used in many different applications, such as pumps, electrical motors, conveyors and cranes. We are also among the world's leading developers of solar inverters.

Danfoss A/S is one of Denmark's largest industrial companies. We have an annual turnover of around DKK 22 billion, and have around 26,000 employees worldwide. We provide solutions within Climate and Energy, a sector we see as a major driving force in the future world economy. We show leadership in business through reliability, excellence and innovation. No matter where you find yourself at Danfoss, the customer is at the center. Our work reflects our corporate behavior; trustworthy, innovative, global, with respect for local cultures and constantly working towards sustainable results.
